Dear Mr Birkett

REQUEST FOR INFORMATION

Thank you for your request for information about ozone monitoring in relation to information alerts and the UK’s Automatic Urban and Rural Network, which we received on 8th August 2013. As you know we have handled your request under the Environmental Information Regulations 2004 (EIRs).

The EIRs apply to requests for environmental information, which is a broad category of information defined in regulation 2 of the EIRs. Public authorities are required to handle requests for environmental information under the EIRs. They give similar access rights to the Freedom of Information Act 2000 (FOIA).

I enclose a copy of the information you requested and responses to your questions.

The London Air Quality Network (including the London Barnes Wetlands monitoring station) is separate from Defra and run by King’s College London on behalf of local authorities, for the purpose of local air quality management. Defra’s air pollution alert systems are automated based on data in the UK-AIR website databases and the UK wide network of stations which form part of Defra’s compliance monitoring network.

Technical issues at the Canterbury station on the 22nd July 2013 led to a disruption in the live data feeds, ie Defra’s air quality data managers did not receive any data from this station for a period of time. These issues were caused by a separate repair on the NOx analyser which interfered with the communications for the whole station for several hours. Once communications were restored, data was retrieved to populate the UK-AIR database but this was not until 24th July at 10:29. Thus an alert was not triggered as it was not part of a live data feed and Defra’s database did not receive the data until 2 days after the
information threshold was breached. There were additional issues with the ozone data between 09:45 and 11:45 on the 22nd July because the instrument suffered a period of date and time record corruption, resulting in missing data for the period in question, hence why some data are missing from UK-AIR downloads.

With regards to the second part of your question, in Annex C below, is a copy of all correspondence relating to exceedences of the ozone information threshold and ozone monitors going offline during July. In order to provide a fuller and more helpful response, I have reviewed your tweets to @defraukair and enquired with Defra’s network contractors about the stations and periods you have mentioned.

Charlton Mackrell, 14th July: contractors report that communications were lost during this period and this may be linked to the high temperatures affecting the equipment although we cannot pinpoint an exact cause. Unfortunately on this occasion the data were not recoverable.

Teddington 18th July: In this instance contractors gathered data via a standard modem connected to a CAS (Code Activated Switch) linked to each individual site instrument. In this particular case the CAS ‘locked up’ (froze with regards to accepting instructions to communicate) as sometimes happens. The local site operator restored correct functionality and resumption of routine data collection from the instruments (NOx and O3) was made at 15:00BST and sent to the data management unit at 15:25.

It is worth bearing in mind that there is a diverse range of instruments and communication methods deployed on the network. Data gathering issues occur for a variety of reasons depending on the type of communications installation deployed and instruments at site. This means that there are many opportunities for faults to occur in measurement and data handling.

Defra has a rigorous site management and quality control/assurance procedures in place to minimise these instances. In some cases, the next data gathering sequence initiated by Central Management and Control Unit following an issue will be successful and the data management software can retrieve the data. Where communication continues to be at fault there are instances where on board instrument logging can provide a means by which data continues to be collected but not disseminated. In the worst case scenario, instrument malfunction/vandalism/power failure can lead to a loss of data irrespective of the extent of communication attempted via telemetry (as was the case with the Canterbury data between 09:45 and 11:45 on the 22nd July).

In keeping with the spirit and effect of the EIRs, and in keeping with the government’s Transparency Agenda, all information is assumed to be releasable to the public unless exempt. Therefore, the information released to you will now be published on www.gov.uk together with any related information that will provide a key to its wider context. Please note that this will not include your personal data.
I attach Annex A, which explains the copyright that applies to the information being released to you.

I also attach Annex B giving contact details should you be unhappy with the service you have received.

If you have any queries about this letter, please contact me.

Yours sincerely

Emily Connolly

Copyright

The information supplied to you continues to be protected by copyright. You are free to use it for your own purposes, including for private study and non-commercial research, and for any other purpose authorised by an exception in current copyright law. Documents (except photographs or logos) can be also used in the UK without requiring permission for the purposes of news reporting. Any other re-use, for example commercial publication, would require the permission of the copyright holder.

Most documents produced by Defra will be protected by Crown Copyright. Most Crown copyright information can be re-used under the Open Government Licence. For information about the OGL and about re-using Crown Copyright information please see The National Archives website.
Copyright in other documents may rest with a third party. For information about obtaining permission from a third party see the Intellectual Property Office’s website.

Annex B

Complaints

If you are unhappy with the service you have received in relation to your request you may make a complaint or appeal against our decision under section 17(7) of the FOIA or under regulation 18 of the EIRs, as applicable, within 40 working days of the date of this letter. Please write to Mike Kaye, Head of Information Standards, Area 4D, Nobel House, 17 Smith Square, London, SW1P 3JR (email: requestforinfo@defra.gsi.gov.uk) and he will arrange for an internal review of your case. Details of Defra’s complaints procedure are on our website.

If you are not content with the outcome of the internal review, section 50 of the FOIA and regulation 18 of the EIRs gives you the right to apply directly to the Information Commissioner for a decision. Please note that generally the Information Commissioner cannot make a decision unless you have first exhausted Defra’s own complaints procedure. The Information Commissioner can be contacted at:

Information Commissioner’s Office
Wycliffe House
