Temperature forecast for today (09 September 2012)

Opacity: 100%

Minimum temperature map

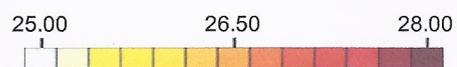

Maximum temperature map

Minimum temperature key (°C)

Maximum temperature key (°C)

Information

The temperature maps show the predicted daily minimum (left hand map) and maximum (right hand map) temperatures over the Olympic Park area for the date shown. These temperature forecasts are created using the **ADMS Temperature and Humidity modelling system**, which accounts for the hourly variation of heat emissions from buildings and transport, as well as temperature variations due the spatial variation of land use in the area.

This work was partly funded by EPSRC (grants EP/E016375/1, EP/E016308/1 and EP/E016448/1) during the LUCID project.
