

The MS Access Database contains data extracted from the LAEI 2010. This contains base year data for 2010, a back calculation of 2008 and a future year estimate of 2012. All regulated pollutants have been included.

The data has been extracted from the full set of links in the LAEI, this includes those outside of Greater London, up to and including the M25.

The extract contained within this workbook is for 2010 for NOx and exhaust PM10 only.

Two sets of data have been derived from the LAEI 2010. The total tonnage per link and the total tonnage per km per link. The latter enables the user to compare emissions rates across links of different lengths.

The emissions data is presented as tonnes per annum (unrounded)

The data is ranked by tonnes of total diesel emission

The column headings for each data set are set out below

	Data tonnes
